PROFESSIONAL SUMMARY

AI/ML-focused engineer skilled in Python, Machine Learning, Deep Learning, Generative AI, RAG, Computer Vision, AWS, and MLOps. Hands-on experience developing AI applications using LLMs and computer-vision technologies, with professional experience in data engineering, ETL automation, CI/CD, and enterprise workflows. Targeting AI/ML Engineer and AI Engineer opportunities.

EDUCATION

MIT Academy of Engineering, Pune

BTech, Electronics & Communication Engg. (CGPA: 7.8)

Pune, Maharashtra

Nov. 2020 – May 2024

EXPERIENCE

Vodafone Intelligent Solutions (VOIS)

Dec 2024 – Present

IT Deployment Engineer

Pune, Maharashtra

- Contributed to the **automation transformation of Enterprise Data Warehouse (EDW) workflows**, automating ETL processes and data operations using automation tools, CI/CD pipelines, and bots for the UK customer-data segment.
- Developed an **EDW knowledge assistant** that centralizes runbooks, process documentation, troubleshooting guides, and error-resolution information, enabling team members to quickly query and access solutions for operational issues.
- Contributed to **CTDA automation initiatives**, helping transform traditionally manual workflows into automated processes and improving operational efficiency across the EDW environment.

Neave Tech Pvt. Limited

Aug 2023 – Oct 2024

Tech Management Intern

- Worked in an early-stage IT startup, collaborating on **AI-based bots and digital solutions for government-sector clients**, while supporting client requirements, project coordination, and end-to-end technical delivery.

PROJECTS

RAG-Based Document Q&A Chatbot | [Link](#)

- Developed an AI-powered chatbot that allows users to ask questions about custom documents and receive context-aware answers by retrieving relevant information from the document knowledge base using Retrieval-Augmented Generation (RAG).
- Implemented document processing, semantic search, and relevant context retrieval to generate accurate, document-grounded responses using an LLM.

Face recognition based attendance system | [Link](#)

- Developed an automated attendance system integrating **geofencing, face recognition, and MobileNetV2-based liveness detection** to prevent unauthorized access and proxy attendance.
- Implemented **OpenCV-based image capture and facial matching** against student datasets, with attendance recorded when the face match exceeded an **80% confidence threshold**.

TECHNICAL SKILLS

Languages: Python, SQL,

AI/ML: : Machine Learning, Deep Learning, PyTorch, Scikit-learn, NLP, Feature Engineering, Model Evaluation

Generative AI : LLMs, RAG, Embeddings, Prompt Engineering, LangChain, LangGraph, Agentic

Cloud & DevOps : AWS, Docker, Git, GitHub, Linux, Jenkins

Data : Pandas, NumPy, ETL, Data Warehousing ,

MLOps : MLflow, Model Deployment, Model Monitoring

Computer Vision: OpenCV, Face Recognition, Image Processing, Liveness Detection

CERTIFICATIONS

Professional Data Engineer: Google

AWS: : AWS Academy Graduate- AWS Academy Cloud Foundations

DevOps with AWS : LinkedIn

Python For Everyone : Google

Agentic AI Engineer : Google

Certificate of completion: Claude 101 : Anthropic

SQL Essential Training : LinkedIn

Data Analysis using Power BI : ICT Academy
